

TimeTense and Aspect in Early Vedic Grammar (Brills Studies in Indo-European Languages & Linguistics)

This book takes a fresh look at the relationship between aspect, tense and mood in Early Vedic, the language of the Rigveda. Although numerous studies have examined the functional range of individual verbal categories in this language, this work is the first attempt to approach this problem from an overall, systemic perspective. With insights from formal semantics and linguistic typology, the author demonstrates that aspect represents a grammatically relevant semantic dimension on a par with tense in the Early Vedic verbal system, thereby indicating that the language has preserved an aspectual opposition similar to the one found in Homeric Greek. Apart from these general findings, the book provides a theoretical framework designed for exploring inflectional semantics in dead languages.

I'm super hyped about the VR, but you obviously knew that already because of my last blogpost. There were a few hiccups because I ordered it online and I was working during the time it came. I stressed, freaked, jumped and finally gave up on the thought I got to play on the day it came out. But luck was on my side and when I got home, 20 minutes later the VR glasses arrived! In this post I will take you with me on my first experience with virtual reality. Was it as awesome as I hoped? Or is nauseating and not really my cup of tea? Read and find out!
